

ACF Statement

Wychen Feb 2008

## Certificate of Origin Policy (TSE/BSE)

Our commitment to the development of animal-free products has entailed re-evaluating the identity and source of all raw materials used. These efforts have led to the development of animal component-free Product wherein all components can be documented via a Certificate of Origin, to be isolated from non-animal sources or synthesized using non-animal starting and processing materials.

The facilities are designed to manufacture bulk sterile flow tubes in separate Room, built exclusively for animal free processing. Along with associated warehouse, processing controls and cleaning procedures, the manufacturing zone is completely segregated from any possible sources of animal-derived materials.

All ingredients, ingredient components, and product contact packaging material are not of animal origin.

Products used in Flow tubes 0045,0085 and 0125  
PFA Dupont USP class VI  
Synthetic ruby  
PFA with white colorant (Titanium oxide)

Tested with tap water

Product-specific validated removal studies have not been conducted for the majority of offered items. Statements to confirm that a product is “free of TSE/BSE” are not Scientifically possible; consequently, EQUFLOW BV cannot guarantee that our products are free of TSE or BSE materials. However, we will provide data that allow our customers to evaluate and minimize risk when using our products in their production processes.
